Solve technical challenges with Humber students

Dear Industry Partners,
Does your company need help solving a technical problem or innovation challenge? Students and faculty from our Mechanical Engineering Technology program are looking for opportunities to provide creative solutions/systems/prototypes for different sectors of industry through Capstone Projects which will be offered during Winter 2019 semester.

Collaboration with Humber's School of Applied Technology provides students with real industry experience and gives our partners the chance to implement new technologies and ideas within their practice.

Interested in working with us?

Please send a brief description of your project to shaun.ghafari@humber.ca

Following is a brief Q/A section that may answer some of your questions regarding the procedure.

1. What type of project is preferred?

Design, prototype developments, automated manufacturing stations, ...

2. What is the student's background?

Projects will be offered to the students in Mechanical Engineering Technology discipline in their final year. A team of 3-4 students, under the supervision of faculty, work on a project.

3. What is the time line of the project?

Each project should be completed during January 2019 to April 2019.

4. What is the expectation from industry?

Mentorship and guidance, response to technical questions, and attendance in formal presentation and project showcase.
